We are a media and advertising company with around **50 employees**. We want to structure our internal network by dividing our staff into separate VLANs. Below are the employee types and their estimated counts:

- **30 Regular employees** working in design, content, and editing departments.
- **5 Management staff** who need access to administrative and sensitive systems.
- **10 Guests and external collaborators** who occasionally need internet access only.
- **5 IoT devices** including IP cameras, network printers, and smart displays.
