

General Discription

You will **create** wireframes and high-fidelity mockups for a dedicated **My Account** or **Profile** page in the e-commerce platform. The design should align with branding from UI/UX #1 (color palette, typography, UI components). The page should let users update their personal data (e.g., name, email, password) and view a succinct history of previously placed orders. If time allows, you can showcase how a detailed order view might appear.

What the Freelancer Needs / Requirements

1. **Design Tool**
 - Figma, Sketch, Adobe XD, or a similar platform.
 - Reference the **Branding & Style Guide** to maintain a cohesive look and feel.
2. **User Info & Order Data**
 - Mock or placeholder data for user information (e.g., “John Doe,” “john.doe@example.com”).
 - A brief order list (order ID, date, total cost, status).
3. **Editing User Info**
 - A form or modal for updating fields like name, email, or password.
 - Consider basic validation states for email format or password mismatch.
4. **Delivery Format**
 - Wireframes (low-fidelity) plus polished mockups (high-fidelity).
 - A shareable design file link (Figma, Sketch, etc.) or exported PDF/PNG with annotations.

Task Discription

By completing this assignment, you will **design** a clear, user-friendly interface for viewing and editing profile details, as well as scanning a list of past orders. This ensures users can manage their account seamlessly and quickly find relevant purchase info without navigating multiple screens.

Job Profile

UI & UX Web Designer

Task 1

1. **Wireframe the “My Account” Layout**
 - Sketch sections for **user details** (name, email) and **password update**.
 - Include a link or tab for **Order History**.

- Emphasize an “Edit Profile” button or icon to signal where changes can be made.
- 2. **Draft the Order History Overview**
 - Show a short list of orders (ID, date, amount).
 - If you have space, display a “View Details” link for each order.

Task 2

1. **High-Fidelity Mockups**
 - Apply **brand colors, fonts, and button styles** from the style guide.
 - Use placeholder images or icons to represent a user avatar (optional).
 - Show an editable state or a modal for user info changes.
2. **Incorporate Validation & Feedback**
 - If editing a field requires a correct format (e.g., email), show how errors might display.
 - Consider a simple success message or toast when profile updates are saved.

Task 3

1. **Document & Export**
 - Provide the final design file (Figma link or PDF) that clearly labels sections (Profile Info, Order History, etc.).
 - Annotate margin, spacing, and color usage for developers' reference.
2. **(Optional) Detailed Order View**
 - If time allows, create a layout that appears when a user clicks “View Details” on an order (items purchased, shipping address, total cost).
 - This can be in a modal or a dedicated page.
3. **Mobile-Responsive View**
 - Optional but valuable: demonstrate how the account page and order list adapt to smaller screens (e.g., one-column layout, collapsible sections).

Summary

By completing these steps, you will **create** a comprehensive **User Account & Profile Settings** design, ensuring users have an intuitive way to update their personal data and review past orders. A well-structured account area can significantly improve user satisfaction and promote re-engagement with the e-commerce platform.
